Subject: Critical Compounds
Date: Wednesday, April 08, 2015 8:25:27 AM

Hi David,

I am putting together slides for the PDP Federal/State meeting. We are adding cucumbers and lettuce in July to replace peaches and watermelon – we will have two years' data for each. Are these correct for critical compounds for the labs to cover in cucumbers and lettuce – I pulled from the information you gave me last year prior to the meeting?

- Cucumbers
 - DDVP (Dichlorvos)
- Lettuce
 - DDVP (Dichlorvos)
 - Dimethoate
 - Omethoate

Commodities beyond July are totally up for discussion, including extension of green beans for acephate/methamidophos.

We two commodity slots to fill in October, one in January 2016 and one more in March 2016. Also, we plan (potentially and depending on funding) to revisit eggs in FY16.

Thanks,
Diana
